Abstract

In recent years, the European Commission has published multiple legislative proposal that have an impact on AI systems and Data Science, for example the AI Act and the Data Act. At the same time, the field of AI auditing has been gaining popularity among researchers and companies, who have been joining efforts to apply ethical principles to the whole AI development lifecycle, including the data collection phase. This lecture will illustrate the latest development in the EU Digital Strategy and show how to apply ethical and legal principles in practice.
